Abbreviations: mPFC = medial prefrontal cortex, OFC = orbitofrontal cortex, NAc = nucleus accumbens, Har = harmine, Veh = vehicle, df = degrees of freedom.
Values in columns 2-5 represent mean (SD) in SUV values per group, N = 5 for *Veh* and N = 6 for *Har, DMT, and Har + DMT*. For hippocampus and cerebellum Kruskal-Wallis-test (χ^2) was used, for all other regions a one-way ANOVA (F) was used. Last two columns represent corresponding p-values and degrees of freedom.
